SHV Energy

PAKISTAN

SHV Energy Pakistan has vast experience of serving the need of Pakistan's energy market. This long history has seen SHV Energy Pakistan developing into the largest LPG marketing company, selling around 90,000 metric ton of gas per annum in cylinders and bulk. SHV has one of the largest LPG infrastructures in Pakistan with cylinder filling plants strategically situated throughout the country. It has nation-wide network of distributors and customers & has expertise in addressing industrial applications through Super Gas Bulk solutions.

SHV Energy Pakistan is part of SHV Gas, which operates in the down-stream LPG distribution business in 27 countries in Europe, South America and Asia and at present is the largest LPG marketing and distribution Company in the world. In developing countries such as Pakistan, Philippines, India and China it specializes in providing clean & environment

At present SHV Energy Pakistan, a part of SHV Gas is the largest LPG marketing and distribution Company in the world.

friendly, alternative energy to remote areas to replace wood, kerosene and cow dung used for cooking.

Secured supplies of LPG are obtained under contracts from many local producers including PARCO, OGDCL and PPL as well as imports. This is marketed under the brand names of Pearl Gas and Super Gas to local and rural communities.

Super Gas Bulk

Super Gas Bulk caters to industrial usage of meeting fuel requirements providing LPG in bulk tanks installed at customer premises and safely replenished through an efficient fleet of LPG road tankers. These industries are normally using other fuels like furnace oil, kerosene, high speed diesel (HSD), light diesel oil (LDO), rice husk, wood, electricity or natural gas but want the security, economy and reliability of Super Gas Bulk.

Super Gas Bulk has the properties to cater applications like catering, annealing, metal treatment, chillers, grain drying, poultry rearing, CO2 enrichment, green houses, singeing, steam generation, furnaces and forklift trucks. Presently SHV is also supplying LPG as an alternate fuel to natural gas through LPG Air Mix plants as a complete standby system against natural gas shortages based on interruptible tariffs. This allows industrial and commercial users to be in control of their own energy supplies and not be subject to load-shedding.

The company also provides technical support required for conversion from alternate fuel sources and a backup support service. All bulk installations are engineered to international standards and comply with a very high safety regime.

Super Gas Bulk offers complete solution to industrial and commercial customers who suffer due to load-shedding of Natural Gas, Electricity and are facing pressure problem and production loss. We offer guaranteed and uninterrupted supplies through out the year.

CCC / Manifold

Multi Cylinder installations are an ideal alternative to bulk tank installations where the site may be restricted due to space constraints and access. Multi cylinder installations are also required when a single cylinder is unable to generate ample pressure and flow required for higher consumption. Multi cylinders consist of a

SHV has introduced the "SHV Educational Book Program" whereby the company's authorized Distributors are provided with educational books for donation through a fund to the school of their choice.

minimum of 45.4 kg cylinders arranged in pairs. When one pair is empty a changeover valve automatically switches to the other pair with no interruption in supply.

Home Delivery

In 2006 SHV launched a new scheme in selected areas called the Home Delivery Facility for domestic users of LPG. This scheme has many advantages like convenience at one's doorstep, availability of gas on company rates and timely service with standards and quality ensured by the company.

Corporate Social Responsibilities

Furthermore besides routine business, SHV has a caring attitude towards its employees, customers as well as the general populace. One of the major obstacles for rapid social growth in the country is constrained resources available for rural education. SHV has introduced the "SHV Educational Book Program" whereby the company's authorized Distributors are provided with educational books for donation through a fund to the school of their choice. As the SHV market is concentrated in the rural areas of the country, most of the benefit goes to that sector.

Customers convert to LPG for increased efficiency, cleaner fuel, enhanced life of equipment etc. We play our part as a committed organization in developing and contributing towards the energy resources of the country. We aim at increasing the supply of energy to meet the growing demand and at the same time introduce new applications for catering to growing industrial needs. ■
